

HOW TO INSTALL AND USE WINDOWS 11!!!

INTRODUCTION

- *Hey guys welcome to the video and the channel. So in this video we are going to install and use windows 11 yeah you here right. So if you want to use official windows 11 then you need a Microsoft account and I will be telling you to do that after some minutes. Or if you just want to try windows 11 then there is a ISO file leaked of windows 11 and that's what we are going to use in this video we also need vm machine so the software which I am going to use in this video is virtual box, First of all ISO file and virtual box download links are in the description with the blog of today's video so let's get started.*

DOWNLOADING VIRTUAL BOX

- *To download virtual box go to the description of the video and go to the virtual box download link then if you are using windows click on this link if you are using any other OS systems then on them. So now its downloaded click on it once and install it.*

INSTALLING ISO FILE

- *To install the ISO file click on the ISO file link and then click on download Note ISO file is minimum 4 to 5 GB so before downloading the file check your internet connection wisely, I am not downloading it because I have the ISO file downloaded.*

CREATING VIRTUAL MACHINE

- *Now you have to create the virtual machine so for that open your virtual box click on new and then name whatever you want click on next and then select memory size of your RAM I recommend not to select outside the green line I am selecting 4mb because this is a tut video after choosing you memory size click on next then click on “create a virtual hard disk” click on create then click on “dynamically allocated” then click next your virtual machine’s size it is depended on your pc’s or laptops free data I am again choosing 4mb after choosing your machine’s size click on create and your virtual machine is created.*

INSTALLING WINDOWS 11 IN OUR MACHINE

- *Now once you have created your machine click on settings and go to storage click on the empty disc and click on the cd icon on left and click on choose a disk then choose your windows 11 ISO which you downloaded file and click on ok.*

RUNNING AND TESTING

- *Now our machine is created with windows 11 installed in it click on start and a window will be pop-up click on next then click on*

install now and it will take some time to do its work then click on "I don't have a product key" and select "windows 11 pro" then click on next select this checkbox then click on next select custom install and select this and the setup process will begin and complete. So there you go guys windows 11 is now on you pc so do this setup I will also do this and I meet you when its complete.

GETTING FULLSCREEN

- *So now click on devices click on insert addition then go to the file explorer go to this pc go to virtual box additions and select there VBOX windows addition then click on yes then click on next again click on next and click on install check the checkbox and click on install click on reboot now and click on finish. Now when you are machine reopen enter your pin and sign-in then click on view and select full screen mode and click on switch and here you go guys you have now windows 11 with fullscreen on your pc .*

SO ON THAT NOTE WE COVER THIS VIDEO PLEASE COMMENT THAT DO YOU LIKE THIS VIDEO AND PLEASE CHECK THE NOTES OF THIS VIDEO WHICH I HAVE PROVIDED THE LINK IN THE DESCRIPTION OF THIS VIDEO DO SUBSCRIBE MY CHANNEL AND PUNCH THE LIKE BUTTON ON YOUR SCREEN AND I WILL SEE YOU IN THE NEXT VIDEO UNTILL THEN BYE BYE!!
